  - Usher et al (6,170,967) although teaching a track lighting system with a channel housing a light source that is rotatable and adjustable along an axis, Usher et al does not teach individually and no motivation was found to combine Usher et al with another reference to teach the limitations of a channel having at least one air handling slot located in an upper surface of the channel a casing disposed within the channel having a substantially curvilinear lower surface a linear

extrusion abutting said curvilinear lower surface and slidably adjustable along said curvilinear lower surface or a channel housing a tilt and lock mechanism, said tilt and lock mechanism having an upper portion and lower portion said lower portion being slidably adjustable through a preselected arc within the channel said channel having a plurality of air handling slots .
